MIDI CLASSIC

The heating element boils the contaminated water to transform it into a vapor.

1 Tap water is drawn into the boiling tank.

3 The water vapor passes into the condensing coil leaving the contaminants behind.

4 The fan cools the vapor, transforming it back to water - pure, vapor-distilled water!

5 Distilled water drips through a carbon filter and is collected into a glass jar.

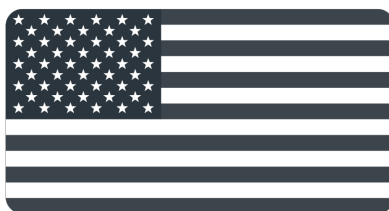

MIDI CLASSIC SPECIFICATIONS

Item number (120V, 240V)	42999, 42999V
Width	21" 53.3cm
Depth	18" 45.7cm
Height	16.5" 41.9cm
Machine weight	41.5lbs 18.9kg
Current Draw 120V	9.0amps
Current Draw 240V	4.5amps
Total wattage	1,100watts
Hertz	50-60Hz
