DISTILLATION

REVERSE OSMOSIS

CARBON FILTRATION

○ Ineffective or minimal reduction

◐ Partial Reduction (Over 50%)

● Complete Reduction (Over 99%)

* The capacity to reduce contaminants diminishes as the system is used and will require frequent replacement or cleaning. Data on premium models only. Some will not show these results. † Both types of arsenic.
‡ Radioactive cesium.

MINI CLASSIC CT

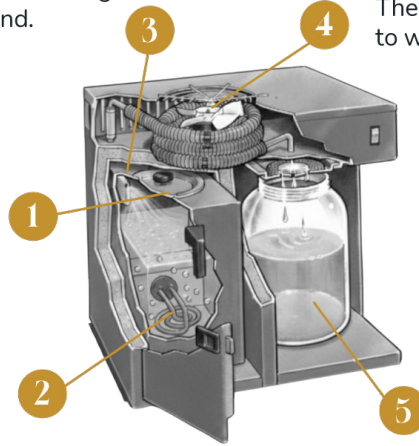

The water vapor passes into the condensing coil leaving the contaminants behind.

The fan cools the vapor, transforming it back to water - pure, vapor-distilled water!

Tap water is poured into the boiling tank.

The heating element boils the contaminated water to transform it into a vapor.

Distilled water drips through a carbon filter and is collected into a glass jar.

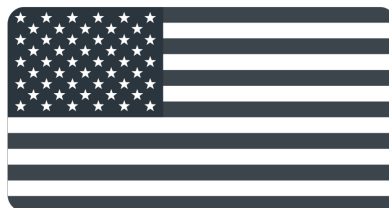

MINI CLASSIC CT SPECIFICATIONS

Item number (120V, 220V, 240V)	46998, 46998EV, 46998V
Width	13.75" 35cm
Depth	9.875" 25cm
Height	15.75"
Machine weight	26lbs 11.8kg
Current Draw 120V	6.9amps
Current Draw 220V	4amps
Current Draw 240V	3.5amps
Total wattage	800watts
Hertz	50-60Hz
